DETAILED ACTION

Response to Arguments

1. Applicant's arguments with respect to claims 14, 18-28 have been considered but are moot in view of the new ground(s) of rejection.

Terminal Disclaimer

2. The terminal disclaimer filed on 3-1-04 disclaiming the terminal portion of any patent granted on this application which would extend beyond the expiration date of US 6,475,663 has been reviewed and is accepted. The terminal disclaimer has been recorded.

Priority

3. A translation of foreign priority papers DE 19819752.7 filed 5-4-98 has been made of record in accordance with 37 CFR 1.55. Therefore the rejection of claims 14, 20-22, 26 and 28 rejected under 35 U.S.C 102(a) as being anticipated by Bauer et al. (WO 99/19917) has been overcome.

Claim Rejections - 35 USC § 112

4. Claims 14, 18-28 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 14 is rejected because it is unclear what is meant by "polytetrafluoroethylene".

Claim Rejections - 35 USC § 102

5. Claims 14, 18, 23, 25, 27 are rejected under 35 U.S.C. 102(b) as being anticipated by Barker et al. (5,643,695).

Barker et al. teaches in column 2, lines 45-50 and column 3, lines 12-16, a negative electrode having an active material consisting of graphite particles having a size less than about 48 microns. Barker et al. teaches in column 12, lines 29-44, that the graphite negative electrode consists of the graphite material and a binder. The binder composition is desirably a binder/electrolyte such as polymeric acrylates which are crosslinked by radiation curing. After mixing, the resulting paste containing the binder, active material and carbon for cathode is coated onto a current collector and any polymer content is polymerized and crosslinked by heat radiation or other curing means. Barker et al. teaches in column 18, lines 55-67, that the negative electrode comprises 80-95 percent by weight of the specific graphite particles and more preferably about 90 percent by weight, the balance constituted by the binder.

Allowable Subject Matter

6. Claims 19-22, 24, 26, 28 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
